

ST 4-600 : ANTI CAR THEFT BOLLARD

Swaraj Secutech's ST4-600 Bollard system is curated to address the menace of Car thefts. Each bollard is a perfect blend of strength and aesthetics that has its own inbuilt operational unit built for rugged use and hack-proof operation. The bollards are manufactured to withstand the vagaries of extreme climatic conditions. All parts of bollards are galvanized to prevent corrosion and smooth functioning even when submerged in water.

To strike a fine balance between aesthetics and security, all bollards have an optional aesthetically pleasing stainless steel finish that easily blends with the environment.
